Cook burgers, hotdogs, and 5d3b920ae0

Title: BVRGER VAN
Genre: Casual, Indie, Strategy
Developer:
Patchwork Games
Publisher:
Patchwork Games
Release Date: 27 Jul, 2018

English

I don't want to be too negative here, because this is the first ever game, from a small indie developer, and so I will tick the 'recommend' box. but there are a number of issues with how the game has been marketed, that need addressing. This game should have been released as Early Access because 80% of the features listed in the description, are not present at this time. The trailer shows hotdogs alongside the burgers and the Steam description states cook burgers, hotdogs and MUCH MORE. The only food items in the current version of the game are burgers. Burgers, burgers and more burgers. The Steam description states Compete with friends which in itself, isn't claiming to be multiplayer, but it's certainly verging on implying such functionality. Steam description states create your own journey in your path. There are no choices to be made. I thought there might have been options to create your own burger recipes, or hell, at least to name your Burger Van but no. The trailer uses the term Flip Burgers and the Steam description ends on the line Keep on Flippin. There is no flipping of the burgers, the simply cook when on the grill. Yes, this might seem quite an insignificant issue, but when the game is literally cooking burgers, I expect to see this functionality in place, especially given the implications within the trailer and description. Although the Career mode is missing, the game description is at least upfront about this part and states

u2018coming soonu2019 The game is also lacking another key feature u2013 a menu! There is no way to edit graphics, sounds, position, music or even to exit the game properly. The only way to exit is to open the Steam app in your HMD and close that way, which causes a number of problems with Steam, which then has to be re-started before the game can be launched again. All this being said, I only paid u00a35.20 for the game at launch and so as long as the Devs are committed to improving / updating the game, I wonu2019t feel cheated.. Fun game! It is what it is. It's you, in a van, selling burgers, fries, hotdogs and possibly more! I only got as far as opening those three items but it was fun. The Good: It runs great, and has a very appealing look. Nothing felt difficult or awkward at all. Mechanics are good, the art style is very good. It's great in short bursts. I can see returning to this to kill some time or if I just am not in the mood for anything heavy. Great to show off and demo. The gradually growing menu from day to day eases players through the game at a nice pace. Good for kids and adults both. Looking forward to see what features they add in as it goes. The Bad: Some of the features are not complete yet but that's expected and they are admitting to that up front. The customers look good enough but I think some player voices would be nice to have. The environment feels a bit audio empty. Maybe a "Thank You" after serving them food, or customers who wait too long say something like "Hurry it up would ya!" Some little audio bumps would be fun to hear. A chance to add some humor as well. Also with each passing day have the background environment change. It's the same everyday at least that I've seen so far. Overall it's worth having in your library so I give it a thumbs up.. Fun game! It is what it is.
